履歴書 · 職務経歴書 · CURRICULUM VITAE · TAILORED FOR Woven by Toyota (ウーブン・バイ・トヨタ)

P é ter J ó zsef L ó dri (ロドリ・ペーテル・ヨージェフ)

Target Role: Senior Systems Software Engineer — Rust, Simulation & Accelerated ML Platform (Arene SDV) (¥12,000,000 – ¥22,000,000+ JPY) · Location: Nihonbashi, Chuo-ku, Tokyo (日本橋室町三井タワー)
Dedicated Site: https://woven.vaked.dev · LinkedIn: https://www.linkedin.com/in/peter-lodri/
Email: peter.lodri@gmail.com · Phone: +36 20 391 5161 · Passport: LODRI PETER JOZSEF (BJ3429501) · Visa Ref: LYYT5925161

01. EDUCATION / 学歴（高校以降すべて）

2007.09 – 2011.06	Secondary school graduation · 高等学校卒業 — B á rdos L á szl ó Gimn á zium（バールドシュ・ラースロー高等学校, Tatab á nya） Advanced Mathematics, Physics, Sport & Computer Science · Comenius Logo Hungarian Championship participant（数学・物理・情報科学・スポーツ重点課程、Comenius Logo 全国大会出場）
2013.09 – 2017.06	BSc, Recreation and Health Development · 学士 — University of Physical Education, Budapest（ハンガリー体育大学） Full Bachelor of Science degree (qualifies for Japanese Engineer / Specialist in Humanities visa status · 技術・人文知識・国際業務ビザ要件適合)
2015	Learn to Program and Analyze Data with Python · 修了 — University of Michigan (Coursera) Data structures, algorithmic analysis, and scientific Python programming
2016	Junior Software Developer, Computer Science · 修了 — Green Fox Academy（ブダペスト） Intensive full-stack & systems software engineering program

02. PROFESSIONAL EXPERIENCE & OPEN-SOURCE ARCHITECTURE / 職務経歴書

2024 – present	Principal Architect & Research Lead — 8b-is（Family Research Company ファミリー研究機関） & Open-Source Architect Architected and shipped ZENO (銭・禅・善, zeno.vaked.dev) — sovereign proof-of-contribution neo-bank with double-entry Kintsugi SHA-256 ledger and procedural Web Audio DSP; AURORA (8b-is.github.io/aurora — sovereign AI assistant & MEM¦8 wave-quantum architecture); MLX-QUANT & pureQTern (1.58-bit BitNet ternary {-1, 0, +1} inference & Metal GPU kernels achieving 12.80× memory compression); AgentField multi-reasoner orchestration; and ~200 edge-deployed systems. Open-source Core Architect on Osaurus (osaurus-ai/osaurus — native Swift macOS AI agent harness with persistent memory & cryptographic identity) and Osiris (simplifaisoul/osiris — real-time OSINT 3D global intelligence platform), and contributor to Headroom (headroomlabs-ai/headroom PR #1418 — kompress domain-routing bias multipliers). Stack: Rust · C · Swift 6 · Metal / WebGL2 · Python · TypeScript · Cloudflare Workers · BitNet b1.58
2024.05 – present	Senior Software Engineer — Plandek Enterprise engineering metrics & delivery intelligence platform. Architect and maintain analytics pipelines and full-stack telemetry across a polyglot distributed stack. Stack: TypeScript · React · Python · Distributed Analytics

2023.05 – 2024	**Senior Software Engineer — Virality Data** Designed and operated high-throughput distributed ingestion and processing pipelines across millions of video streams. Stack: Kafka · Puppeteer · Celery · Pandas · AWS · JavaScript · Python
2022 – 2023	**Senior Software Engineer — ASAPP Inc.** AI-powered customer-service platform for Fortune-100 enterprises. Reduced customer – agent response latency by 50 – 70% via low-latency event-driven microservices. Stack: Go · Kotlin · Scala · Kubernetes · Kafka · AWS
2022	**Lead Go Developer — DailyWire.com** Led the backend engineering team for an integrated live chat and video streaming platform serving 110,000+ concurrent users. Stack: Go · Python · AWS · High-Concurrency Streaming
2021 – 2022	**Senior Python Developer — Institutional Fintech (Sixth Street Partners · Citadel · Morgan Stanley)** Modernized quantitative trading and financial data software stacks from legacy systems to cloud-native, deterministic ETL pipelines. Stack: Python · Bash · AWS · Docker · Quantitative ETL
2019 – 2021	**Lead Python Backend Developer — Cygnet Dooel** Designed mission-critical cyber-intelligence infrastructure, led offensive-security product engineering, and mentored engineers in advanced systems Python. Stack: Python · AWS · Android · C · Go · Java · Kubernetes
2017 – 2019	**Python & Systems Security Developer — Inpedio** Built custom Android kernel/security tooling and messaging behavior-analysis engines; engineered a working Linux kernel kptr_restrict bypass. Stack: Python · C · Android Internals · Java · Go
2016 – 2017	**Software Developer — Saltech Consulting** Built a custom automated UI verification and testing framework for Siemens. Stack: Python · GCP · Java · PEGA

03. WHY Woven by Toyota (ウーブン・バイ・トヨタ) / 志望動機

Woven by Toyota is executing the most ambitious systems integration challenge in Japan: building Arene as a programmable operating system for millions of vehicles while turning Woven City into a living physical-digital testbed. That requires engineers who can cross cleanly between memory-safe Rust systems, deterministic 3D simulation twins, high-throughput cloud telemetry, and compressed edge ML — the exact intersection I have built across Osiris, pureQTern, MLX-QUANT, and 9+ years of production distributed engineering.

Woven by
Toyotaが日本橋から世界へ発信するソフトウェア・ディファインド・ビークルOS「Arene」と実証都市「Woven City」は、モビリティの歴史を書き換える挑戦です。Rust/Cによる高信頼システム開発、リアルタイム3Dデジタルツイン基盤（Osiris）、11万同時接続を処理した大規模分散テレメトリ、そして車載推論を12.80倍効率化する量子化技術（pureQTern / MLX-QUANT）を結集し、AreneとWoven Cityのコア基盤開発に貢献したいと強く志望しています。
